IMPLEMENTATION REPORT · TRIER WORKSHOP 2026

From Design to Data

An LRMoo-based RDF model for Korean translation and criticism, validated on 271 editions of Goethe's *Werther*

Jung Song-yi

Digital Humanities Research Institute, Academy of Korean Studies

20 October 2026

01 · WHO IS ASKING

Why a heritage-data researcher is here

MY FIELD

Korean art history and cultural heritage data

PhD: Bulguksa temple, studied through the colonial museum's documents (1910–1945): image → text → semantic data.

MY QUESTION

A data question, not a literary one

How do records made for people become data that machines, and now AI, can read?

WHY 1923–1932

The first Korean Werthers are colonial

Serialised in newspapers and magazines, translated through Japanese and Chinese. This is the period my heritage work deals with.

I make no claim about gaps in literary scholarship. The claims today are about data: how it is designed, built and read.

Jung Song-yi · Digital Humanities Research Institute, Academy of Korean Studies

What follows July, and in what order

ADDED SINCE JULY

The whole dataset
271 works and 160 critical statements, not four samples

An answer to the R76 feedback
implemented through F28 Expression Creation

Criticism turned into data
the critical text segmented, tagged and linked to the bibliography

One note per node, written for AI
tagged sentences in crm:P3_has_note; files, sheet and demo on GitHub

TODAY, IN FIVE PARTS

1 The source and the pipeline

2 Three design decisions, and your R76 feedback

3 **A note layer that AI can read**

4 Demo — Werther in colonial Korea, 1923–1932

5 Open resources, and three contributions

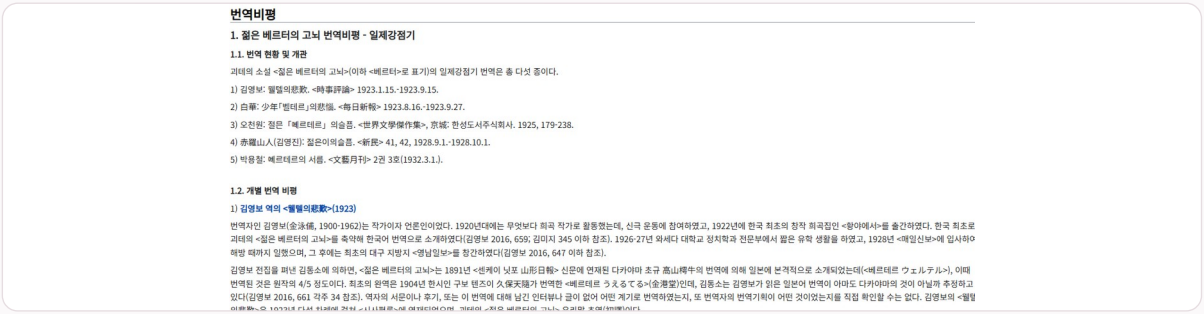

July 2026 — design validation · October 2026 — implementation validation

02 · THE SOURCE

번역비평

1. 젊은 베르터의 고뇌 번역비평 - 일제강점기

1.1. 번역 현황 및 개관

괴테의 소설 <젊은 베르터의 고뇌>(이하 <베르터>로 표기)의 일제강점기 번역은 총 다섯 종이다.

1) 김영보: 웰텔의悲歌, <時事評論> 1923.1.15.-1923.9.15.

2) 白華: 少年「벨테르」의悲惱, <每日新報> 1923.8.16.-1923.9.27.

3) 오천원: 젊은「베르테르」의슬픔. <世界文學傑作集>, 京城: 한성도서주식회사. 1925, 179-238.

4) 赤羅山人(김영진): 젊은이의슬픔. <新民> 41, 42, 1928.9.1.-1928.10.1.

5) 박용철: 베르테르의 서름. <文藝月刊> 2권 3호(1932.3.1.).

1.2. 개별 번역 비평

1) 김영보 역의 <웰텔의悲歌>(1923)

번역자인 김영보(金泳俌, 1900-1962)는 작가이자 언론인이었다. 1920년대에는 무엇보다 희곡 작가로 활동했는데, 신극 운동에 참여하였고, 1922년에 한국 최초의 창작 희곡집인 <황야에서>를 출간하였다. 한국 최초로 괴테의 <젊은 베르터의 고뇌>를 축약해 한국어 번역으로 소개하였다(김영보 2016, 659; 김미지 345 이하 참조). 1926-27년 와세다 대학교 정치학과 전문부에서 짧은 유학 생활을 하였고, 1928년 <매일신보>에 연사하여 해방 때까지 일했으며, 그 후에는 최초의 대구 지방지 <영남일보>를 창간하였다(김영보 2016, 647 이하 참조).

김영보 전집을 펴낸 김동소에 의하면, <젊은 베르터의 고뇌>는 1891년 <센케이 닛포 山形日報> 신문에 연재된 다카야마 초규 高山樗牛의 번역에 의해 일본에 본격적으로 소개되었는데(<베르테르 ウェルテル>), 이때 번역된 것은 원작의 4/5 정도이다. 최초의 완역은 1904년 한시인 구보 텐즈이 久保天隨가 번역한 <베르테르 ウェルテル>(全港堂)인데, 김동소는 김영보가 읽은 일본어 번역이 아마도 다카야마의 것이 아닐까 추정하고 있다(김영보 2016, 661 각주 34 참조). 역자의 서문이나 후기, 또는 이 번역에 대해 남긴 인터뷰나 글이 없어 어떤 계기로 번역하였는지, 또 번역자의 번역기획이 어떤 것이었는지를 직접 확인할 수는 없다. 김영보의 <웰텔

A bibliography table — 318 rows

title of the individual work · book title · series · **author name as printed** · **translator name as printed** · year · publisher · pages · **source translation type** · **work translation type** · notes

A critical essay — running prose

five colonial-era translations and ten later ones, discussed one by one, with quoted passages and cited scholarship. The editors selected and gathered this criticism as material worth researching.

Already linked by hand

Each critical section carries an anchor to its bibliographic record. We reuse those links rather than re-matching them.

uedeko.or.kr — Die Leiden des jungen Werthers · a MediaWiki page: readable and searchable, but not queryable

03 · THREE READERS

Readable by people, by machines, by AI

FOR PEOPLE

UeDeKo page

A bibliography table and a critical essay

Readable and searchable

Relations live in the reader's head

→

FOR MACHINES

RDF · Turtle

Works, translations, events and statements as nodes

Relations explicit, queried with SPARQL

Linked to GND, VIAF, Wikidata, KAC

→

FOR AI

One note per node

Context written as sentences

Each sentence tagged: description, interpretation, compilation, evidence

A language model reads who said what

The core relations stay structured and queryable. Context is added as sentences in one standard property, not as dozens of new properties.

Since language models can now read and interpret text, the data is also written for them

04 · FROM DESIGN TO DATA

From a design to a dataset

271

works

from 318 bibliographic records

160

critical statements

extracted from 183 paragraphs

12,199

triples

Turtle, queried with SPARQL

This study is about **design and construction** — what the data looks like, how it is built, and whether the model holds.

July 2026 — design validation · October 2026 — implementation validation

05 · THE PIPELINE

From a wiki page to queryable data

STEP 1

Parse the bibliography

318 records; archaic Hangul preserved

STEP 2

Merge serials

Each decision recorded with its reason

STEP 3

Normalise names

155 forms → 119 translators

STEP 4

Segment the criticism

183 numbered paragraphs

STEP 5

Convert to RDF

Turtle · GND, VIAF, Wikidata, KAC

318 → 271

Baek-hwa's translation ran in **40 instalments** — 39 recorded in UeDeKo, one work. Every merge is justified in a separate decision file, not in the code.

Every step is a script — rerunnable when UeDeKo is updated

06 · DESIGN DECISION 1

Twenty-seven names, one author

SPARQL · ktrans-data.ttl

```
SELECT ?form WHERE {
  kt:P-goethe skos:altLabel ?form .
}
```

26 printed forms → **1** person: **Johann Wolfgang von Goethe**

Goe'the · Goethe. Johann Wolfgang · J. W. Goethe · J.W. 괴테 · J.W. 폰 괴테 · J.W.V.괴테 · J.W.von Goethe · J.W.괴에테 · J.W.괴테 · Johann Wolfgang von Goethe · W.괴테 · WOLFGANG VON GOETHE · 쇠데 · 게-테 · 괴-테 · 괴에테 · 괴테 · 궤-테 · 궤에테 · 꾀-테 · 꿰에테 · 요한 괴테 · 요한 볼프강 괴테 · 요한 볼프강 폰 괴에테 · 요한 볼프강 폰 괴테 · 쾌-데

271 translations, counted at once

LRMoo

F1 Work
one, before any language

↓ R3

F2 Expression
German original and every Korean translation

One of the twenty-seven is **not Goethe**. A 1964 anthology printed Werther's letters and credited **the character** as the author. A flat database hides this; mapping each form to a person exposes it.

Query result on ktrans-data.ttl — 26 forms resolve to one person

07 · DESIGN DECISION 2

One field, two independent axes

Coverage — how much was translated

complete · partial · adapted · bilingual · unverifiable

Route — what it was translated from

direct · relay · unverifiable · **unstated**

Baek-hwa, 1923

Partial *and* relay. One field can record only one of the two.

79

records where source type and work type **do not match**

Kang Du-sik, 1965 — a complete translation directly from German, coded *partial* because it was bundled with *Faust* in a collected edition.

Not the translation but the publishing format changed the classification.

Recounted with a script — 81 in July, 79 now

08 · SOURCE TEXTS

Two routes into Korean, in the same year

12
works marked **relay**

0
works marked **direct** — not once

258
unstated, which is not the same as direct

7
source texts recovered **from the criticism**

Translation	Source text	Route	Certainty	Evidence
Baek-hwa · 1923	Guo Moruo, Chinese 1922	relay	confirmed	Kim Mi-ji 2018
Kim Yeong-bo · 1923	Takayama Chogyū, Japanese 1891	relay	inferred	Kim Dong-so, para 12
O Cheon-won · 1925	edition unspecified	relay	confirmed	translator's preface
Kang Du-sik · 1965	German original	direct	confirmed	edition named by translator

Metadata: 12 relay · 0 direct · 1 unverifiable · 258 unstated · criticism resolves 7

09 · YOUR FEEDBACK

Where does “relay” belong?

German original

Goethe, 1774

독일어 원문

`kt:E_de`

← from

Japanese translation

Takayama Chogyū, 1891

다카야마 초규 일본어역

`kt:E_ja_takayama`

← from

Korean translation

Kim Yeong-bo, 1923

김영보 한국어역

`kt:T001`

Seen from the German original, the Korean is one step removed: a **relay** translation. 원문 기준으로는 한 번 거친 중역

1 · JULY

“Relay” was written on the book

```
kt:T001  ktrans:viaType  kt:via-relay .
```

Relay from what? Through which text? One value on the translation cannot say.

7 월 : ' 중역 ' 을 번역본에 적었다 . 무엇을 거쳤는지는 말하지 못한다 .

2 · FEEDBACK

Put it on the arrow: R76 + R76.1

```
kt:T001  lrmoo:R76_is_derivative_of  kt:E_ja_takayama .
   ↳ R76.1 has type: direct
kt:E_ja_takayama  lrmoo:R76_is_derivative_of  kt:E_de .
```

Right: direct from the Japanese, relay from the German.

But an RDF arrow cannot carry a type of its own: one extra node per arrow, or RDF 1.2, still a W3C draft.

피드백 : 화살표 (관계) 에 붙여라 . 맞는 말이지만 , RDF 에서는 화살표마다 노드가 하나 더 필요하다 .

■ node 노드 ■ relation 관계 ■ kind 종류 ■ value 값

Example throughout: Kim Yeong-bo's 1923 translation, the first Korean Werther

09 · WHAT I BUILT

The act of translating becomes a record card

TRANSLATION EVENT · F28 · kt:ev-T001

What was made 만든 것	Kim Yeong-bo's Korean Werther
Translator · year 역자 · 연도	Kim Yeong-bo · 1923
Work 작품	Goethe's Werther
Translated from 저본	Takayama's Japanese, 1891
Route 경로 : 중역	relay
Certainty 확실성 : 추정	inferred
Who says so 근거	Kim Dong-so · para_12

THE SAME CARD IN THE DATA · ONE TRIPLE PER LINE

■ node 노드 ■ relation 관계 ■ kind 종류 ■ value 값

```
kt:ev-T001   a                                  lrmoo:F28_Expression_Creation .
kt:ev-T001   crm:P2_has_type                    kt:type-translation-event .
kt:ev-T001   lrmoo:R17_created                  kt:T001 .
kt:ev-T001   lrmoo:R19_created_a_realisation_of kt:W01 .
kt:ev-T001   crm:P14_carried_out_by             kt:P-김영보 .
kt:ev-T001   crm:P4_has_time-span               "1923" .
kt:ev-T001   crm:P16_used_specific_object       kt:E_ja_takayama .
kt:ev-T001   crm:P2_has_type                    kt:via-relay .
kt:ev-T001   crm:P2_has_type                    kt:cert-inferred .
kt:ev-T001   crm:P3_has_note                    "(interpretation) …"@en .
```

Standard, not a workaround: LRMoo says an F28 may use expressions as source, also expressed by R76; R2 is the path through F28. The short links stay for simple queries.

Events only where needed: one creation event per translation; source and route (yellow) on 7 of 271; serial instalments and venues stay in the notes.

Design rule: readable with basic RDF only, one fact per triple. Simple, standard patterns are also easier for a language model to query.

10 · DESIGN DECISION 3

Criticism as statements, not verdicts

WHAT
which translation is evaluated

BY WHICH DIMENSION
ten controlled items

WITH WHAT POLARITY
+ / − / 0 — evaluations only, given by me

FROM WHERE
a numbered paragraph of the critical text

PLUS, MINUS, ZERO · MY SIGNS ON THE CRITIC'S SENTENCES

+ Baek-hwa (1923) translated the editor's preface that Kim Yeong-bo had left out.

Jo Hyang · fidelity · para_25　김영보가 생략한 편집자 서문을 백화는 번역했다

− Park Yong-cheol (1932): the letters of 15–16 March are cut, so the cause of the class conflict is blurred.

Jo Hyang · social critique · para_64　3 월 15·16 일 편지가 삭제되어 신분 갈등의 원인이 흐려졌다

0 Kim Yeong-bo (1923): the editor's preface and the first letter are left out, but the letter form is kept.

Jo Hyang · fidelity · para_13　편집자 서문과 첫 편지를 생략했으나 서간체 형식은 유지했다

The sentence is the critic's. The sign is mine, read from the critical text. How: next slide.

OPPOSING VIEWS STAY · PARA_86

Jo U-ho (−)

1950s translations stayed at the level of retranslation and adaptation.

Jo Hyang (+), a rebuttal

Seven complete translations appeared then, and they were not weak.

The model records who said what, and where. It does not decide.

160 statements · every one traceable to its paragraph — the data indexes the criticism, it does not replace it

How I gave + / − / 0

UeDeKo has no such value. The critic writes sentences. I read each evaluative sentence in the critical text and gave it a sign, so that the prose can be queried.
+/−/0 은 후대 연구자가 매긴 점수가 아니다 . 이 연구에서 편찬자가 비평 원문을 읽고 붙인 값이다 .

SIGN	MY RULE	THE CRITIC'S OWN WORDS · ORIGINAL, WITH PARAGRAPH
+	**Gain** something is kept or rendered as in the original	원작처럼 편집자의 말로 시작한다 . 초역인 김영보의 번역에서는 생략되었던 부분이다 . Jo Hyang on Baek-hwa 1923 · para_25 · fidelity
−	**Loss** something is cut, weakened or blurred	그가 시민계급 출신이라는 점은 원작에서처럼 명확하게 드러나지 않는다 . Jo Hyang on Park Yong-cheol 1932 · para_64 · social critique
0	**Neither, or both** a change is noted, but not weighed; or a loss and a keep stand together	원작의 편집자 서문은 생략되었으나 , 서간체 소설 형식은 유지되고 있다 . Jo Hyang on Kim Yeong-bo 1923 · para_13 · fidelity

Only evaluations get a sign (fidelity, naturalness, social critique, interpretation, accuracy, error history). Observations of style get none.
Every sign keeps its evidence: the exact words it was read from, and the paragraph. Paragraph 64 holds both a + and a −, so it became two statements.

Signs given by the compiler in this study, reading Jo Hyang's essay; the evidence words are kept in source/UeDeKo_Werther_ 구조층 _ 초안 .xlsx

One paragraph, three nodes

JO HYANG'S ESSAY · PARAGRAPH 12 · ORIGINAL, UNCHANGED

김영보 전집을 펴낸 김동소에 의하면 , < 젊은 베르터의 고뇌 > 는 **1891 년 < 센케이 닛포 山形日報 > 신문에 연재된 다카야마 초규 高山樗牛의 번역에 의해 일본에 본격적으로 소개되었는데 (< 베르테르 ウェルテル >), 이때 번역된 것은 원작의 4/5 정도이다 .** 최초의 완역은 1904 년 한시인 구보 텐즈이 久保天隨가 번역한 < 베르테르 うえるてる >(金港堂) 인데 , **김동소는 김영보가 읽은 일본어 번역이 아마도 다카야마의 것이 아닐까 추정하고 있다** (김영보 2016, 661 각주 34 참조). **역자의 서문이나 후기 , 또는 이 번역에 대해 남긴 인터뷰나 글이 없어 어떤 계기로 번역하였는지 , 또 번역자의 번역기획이 어떤 것이었는지를 직접 확인할 수는 없다 .** 김영보의 < 웰텔의悲歎 > 은 1923 년 다섯 차례에 걸쳐 < 시사평론 > 에 연재되었으며 , 괴테의 < 젊은 베르터의 고뇌 > 우리말 초역 (初譯) 이다 .

In English: Takayama's Japanese version (1891) covered about 4/5 of the novel; Kim Dong-so infers that Kim Yeong-bo read it; no preface or interview survives to confirm the translator's plan.

kt:E_ja_takayama · the Japanese translation

(description) Serialised in Yamagata Nippō, 1891; about four fifths of the original.

(설명) 원작의 약 4/5 분량 , 『山形日報』 연재

kt:ev-T001 · the translation event

(interpretation) Kim Dong-so infers that Kim Yeong-bo read Takayama's version. Certainty: inferred.

(해석) 김동소 : 다카야마 역으로 추정

Statement · Jo Hyang · fact

Werther in colonial Korea, 1923–1932

1. **In what form did it appear?**
   newspaper and magazine serials, books
2. **Through which languages?**
   German, Japanese, Chinese, English
3. **How do later scholars judge these translations?**
   64 critical statements
4. **Asked in plain words**
   an AI receives the RDF, writes the query, answers

Who is judging?

The evaluations come from present-day scholarship: the UeDeKo critical essay by Jo Hyang and the studies it cites.

No criticism from the 1920s is in the data. The question is how later scholars evaluate these translations.

5 translations · 64 critical statements · every figure in the demo is a SPARQL result on ktrans-data.ttl

OPEN THE LIVE DEMO → `song-yijung.github.io/ktrans/demo`

ANOTHER WAY · THE RESULTS GIVEN AS TEXT

Every point names a speaker and a paragraph

2. How later scholars judged the style (Yang Geon-sik)

Every judgement of style comes from **Jo Hyang**. Kim Mi-ji's only statement is the factual one about the source (para_24).

Lexical register

- Compared with Kim Yeong-bo, he uses Korean that is freer of Sino-Korean words and style (Jo Hyang, para_27).
- He uses Korean pronouns instead of 彼女 but keeps 君 (Jo Hyang, para_36).
- Compared with Kim Yeong-jin and Park Yong-cheol, his language is still mostly Sino-Korean (Jo Hyang, para_38).
  - These three statements look inconsistent, and the tags differ too (neutral, modern, Sino-Korean style). The reason is that each uses a different baseline: Yang is less Sino-Korean than Kim Yeong-bo but more Sino-Korean than Kim Yeong-jin or Park Yong-cheol. When you cite them, it's worth stating which translation is the baseline.

Sentence endings and address

- He mostly uses the -ne/-de ending (Jo Hyang, para_30).
- The -de/-ne ending gives the text a familiar tone (Jo Hyang, para_33).
- He addresses the recipient with the Japanese-style 君 (Jo Hyang, para_30).

Naturalness (both positive)

- His translation is more restrained and natural than Kim Yeong-bo's (Jo Hyang, para_33).
- His spoken Korean is more natural than Kim Yeong-bo's (Jo Hyang, para_38).

Proper nouns

- His is the first translation to render Klopstock by its original sound, and later translations follow him (Jo Hyang, para_33).

WHAT WE CHECKED

All 16 statements match the data — speaker, paragraph and content, one by one.

Nothing is invented. What the context does not hold, the answer says is not in the data.

THE MODEL NOTICED

Three judgements on vocabulary use three different baselines.

Less Sino-Korean than Kim Yeong-bo, more than Kim Yeong-jin and Park Yong-cheol. Question 3 made the same point: a judgement needs its baseline.

Claude Opus 5.5, 17 October 2026 · context: Yang Geon-sik 1923 (English), from the demo page (Question 4, "Another way") · answer abridged to its style section

DEMO · READING THE ANSWER

Check each point against the data

THE MODEL SAYS	THE LINE IT CAME FROM · IN THE CONTEXT	
Compared with Kim Yeong-bo, he uses Korean that is freer of Sino-Korean words and style (Jo Hyang, para_27). 김영보보다 한자어 · 한문투가 적은 우리말을 쓴다 (조향 , para_27)	`Jo Hyang · observation · lexical register = neutral · para_27: Uses Korean freer of Sino-Korean words and style than Kim Yeong-bo`	✓
His translation is more restrained and natural than Kim Yeong-bo's (Jo Hyang, para_33). 김영보 역보다 절제되고 자연스럽다 (조향 , para_33)	`Jo Hyang · evaluation · naturalness = natural · polarity + · para_33: More restrained and natural than Kim Yeong-bo's translation`	✓
Kim Mi-ji's only statement is the factual one about the source (para_24). 김미지의 진술은 저본에 관한 사실 하나뿐이다 (para_24)	`Kim Mi-ji · factual statement (source text) · para_24: Baek-hwa's source is Guo Moruo's Chinese translation — her only line of the 16`	✓

WHAT NO SINGLE LINE SAYS

Three judgements on vocabulary use three different baselines: less Sino-Korean than Kim Yeong-bo (para_27), more than Kim Yeong-jin and Park Yong-cheol (para_38). The model put the lines side by side. It connected them; it did not invent.

한 줄에는 없는 것 : 어휘 평가 세 건의 비교 기준이 서로 다르다 . 모델은 줄들을 나란히 놓았을 뿐 , 지어내지 않았다 .

All 16 statements in the answer were checked this way: speaker, paragraph and content match · Claude Opus 5.5, 17 October 2026

wd:Q5879
= Goethe in Wikidata

Both graphs point to the same Wikidata item. That is all “linked” means today. 두 그래프가 같은 위키데이터 ID 를 가리킨다 . 지금 ‘연결’ 은 이것뿐이다 .

2 · TESTED: ONE QUERY OVER BOTH FILES

ktrans-data.ttl + the MiMoText RDF dump in one store. The query joins on the Wikidata ID.

Result: 1 row, Goethe.

ktrans side: author of the work behind 271 Korean translations.

MiMoText side: a name and the ID. No novel in MiMoText names him as author (0 works).

3 · NOT LINKED YET

No triple in either graph points to the other.

Werther itself is not in MiMoText; it holds French novels, 1750–1800.

Three French novels name Werther only in their titles: *Caroline* (1786), *Werthérie* and *Stellino ou le nouveau Werther* (1791). I found them by searching titles for “werth”. No property ties them to Goethe or Werther.

Tested 19 October 2026 · MiMoText RDF dump of 20 September 2024 · query: queries/mimotext_join.rq

NEXT · AN IDEA, NOT YET BUILT

One author, two kinds of reception

Goethe · wd:Q5879
the one point both graphs share · 두 그래프가 함께 가진 유일한 점

MiMoText · FRANCE, 1786–1791

Werther lives on as a name on new novels

Caroline (1786): “published by the translator of Werther”

Werthérie (1791): letters, sensibility

Stellino ou le nouveau Werther (1791): “the new Werther”

Rewritings, not translations. Tied to Werther only by their titles; Goethe has no works in MiMoText.

프랑스 : 베르터의 이름을 단 새 소설 (다시 쓰기)

ktrans · KOREA, 1923–1932

Werther arrives as translated text

Goethe → one work → 271 Korean translations

1923–1932: five translations; four came through Japanese, Chinese or English

Leiden became 悲歌 · 悲惱 · 슬픔 · 서름 in the titles

Translations, each with its route and the later scholars' judgements.

한국 : 번역된 텍스트 (대부분 중역)

A question for both, through Goethe: how did his novel travel — as a name on new books, or as a translated text?

What is missing: a link from the French novels to Werther. LRMoo has one for works: R2 is derivative of, typed with R2.1, e.g. ‘imitation’. A proposal; the decision is MiMoText's.

Everything on this slide is in the two graphs today, except the missing link · MiMoText Q2218, Q2446, Q2433, Q415

Three contributions

1

Work and expression separated

Translations become equal expressions of one work, not by-products of the original.

2

Two axes recovered

79 cases that counting alone cannot see — publishing format, not translation, changed the classification.

3

Criticism as statements

Conflicting views preserved rather than resolved, each traceable to its paragraph.

Four definitions of its own

one class — **Translation**
three properties — **sourceType**, **viaType**, **hasPolarity**

Everything else is LRMoo and CIDOC CRM, used as they are.

Werther is a pilot. The pipeline is not bound to this work, and the same five steps apply to other works and language pairs. The note layer keeps the data readable for people and for AI.

That is what the design was for.

Inherited: LRMoo v1.1.1 · CIDOC CRM v7.1.3 · design principle from MiMoText
